

Travel Accounting

Deep Scan Report

Generated: August 27, 2026
Sources: Live Supabase + Vercel + GitHub MCP + Codebase Analysis
Version under review: Desktop & Web v1.0.10

Overall Rating: 7.8 / 10
Phase 1 production-ready | Phase 2 polish recommended

1. Executive Summary

Overall Rating: 7.8 / 10
Phase 1 sync (Parties, Packages, Tickets create, Payments) is production-usable.
Desktop v1.0.10 tested successfully by user. Web and GitHub aligned on same commit.
Hotel / Visa / Transport / Misc booking sync not yet implemented (Phase 2).
MCP integrations active: Supabase, Vercel, GitHub — live deep scan enabled.

2. Stack Alignment (Live Verified)

GitHub Release: app-v1.0.10 | commit 21956e0
Vercel Production: READY | commit 21956e0 | main branch
Web URL: https://travel-accounting-alpha.vercel.app
Desktop: v1.0.10 installer published (x64-setup.exe, MSI, Mac DMG)
Supabase Project: riszmqmjbkscpzfoumq.supabase.co
GitHub Repo: ikram45504-tech/project-falcon-alpha
Vercel Team: travel-soft | Project: travel-accounting | Framework: Vite

3. MCP Connection Status

Supabase MCP: CONNECTED — 20 tools (project-scoped)
Vercel MCP: CONNECTED — 37 tools (Plugin active)
GitHub MCP: CONNECTED — 44 tools, 4 resources
All three verified with live API calls on scan date.

4. Live Supabase Data (Row Counts)

parties 2 rows
package_bookings 1 row (UB-1115, PURCHASE)
package_booking_lines 11 rows
ticket_bookings 0 rows
ticket_booking_lines 0 rows
payment_entries 0 rows
payment_v2_meta 0 rows

hotel_bookings 0 rows
 visa_bookings 0 rows
 transport_bookings 0 rows
 misc_bookings 0 rows
 Total public tables in schema .. 48 tables
 Ticket line columns (airline_name, pnr, flight_type, ticket_route): APPLIED

5. Section Ratings

Parties / Vendors 9/10 OK — full bidirectional sync
 Package Bookings 9/10 OK — reference implementation
 Ticket Bookings 7/10 Create OK; edit/void need polish
 Payments V2 8/10 Code ready; 0 rows in cloud yet
 Sync Engine 8/10 Push/pull/reconcile working
 Desktop App v1.0.10 8.5/10 User confirmed working
 Web App (Vercel) 8/10 Deploy aligned with v1.0.10
 Hotel/Visa/Transport/Misc 3/10 Desktop-only, no cloud push
 Ledger / Statements 5/10 Web partial (package+payments only)
 Supabase RLS / Security 6/10 Phase 1 OK; gaps on tickets/hotel

6. Security Findings (Supabase Advisor)

RLS OK (with policies): parties, package_bookings, package_booking_lines,
 payment_entries, payment_v2_meta, companies, users
 RLS OFF (ERROR): ticket_bookings, ticket_booking_lines, audit_logs,
 booking_adjustments, package_booking_adjustments
 RLS ON but NO policies (~30 tables): hotel, visa, transport, misc,
 operational tables — web blocked until policies added
 RLS uses user_metadata for company_id — flagged as insecure long-term
 Recommendation: migrate to app_metadata or users table join

7. What's Working (Confirmed)

Party/Vendor create, edit, delete — web !" desktop !" Supabase
 Package booking create/update/void — web !" desktop sync
 Package delete on web removes from desktop after Sync
 Ticket booking create on web (after schema column fix)
 Payment V2 sync code (create/update/void bundles)
 Auto sync every 5s + manual Sync button on desktop
 GitHub release pipeline — Windows + Mac installers
 Vercel auto-deploy from main branch

8. Needs Polish (Priority Order)

P1 — Ticket update/void cloud sync + Supabase RLS for ticket tables

P1 — Payment delete reconcile on desktop pull

P2 — Web ledger/totals (getPartyBookingTotals Supabase branch)

P2 — Hotel booking cloud sync (mirror PackageFlowDb pattern)

P3 — Visa, Transport, Misc cloud sync (one module at a time)

P3 — Operational details sync (passengers, flights, hotels)

P4 — Fix RLS user_metadata !' secure company scoping

P4 — Failed sync queue auto-retry + last synced timestamp UI

9. Recommended Phase Roadmap

Phase 1 (DONE): Parties, Packages, Ticket create, Payments, Delete reconcile

Phase 2A (Next): Ticket edit/void, Ticket RLS, Payment delete reconcile

Phase 2B: Hotel !' Visa !' Transport !' Misc (one by one)

Phase 3: Operational details sync, Adjustments, Audit logs

Phase 4: Supabase Realtime, full RLS hardening, web statements complete

10. Conclusion

The setup is real and working — not just code on paper.

Desktop v1.0.10 is suitable for daily Phase 1 operations.

Web app matches desktop code (commit 21956e0).

Full MCP access now enables autonomous DB/deploy/repo checks.

Proceed with Phase 2A before expanding to hotel/visa modules.
